CHEM-FLO™ LIQUID Peanut Special is a nutrient compound formulated with the natural organic sugars of glucoheptonic acid. Sugar acids have the capacity to form multi-bond, water soluble complexes with various metal ions resulting in a very stable product that remains available in the soil or fertilizer for uptake by crops.

CHEM-FLO™ LIQUID Peanut Special is non-phytotoxic and safe to use as a foliar or aerial application or in X-O-X fertilizer grades on most crops. It is recommended for use throughout the season in a program of multiple applications for greater efficiency. This provides a continuous supply of vital nutrients at or near the time they are needed most and under all growing conditions including insect and disease pressure, leaching and drought that often interrupt nutrient supply.

CHEM-FLO™ LIQUID Peanut Special can be added to most nitrogen solutions or fluid fertilizers and impregnated on dry blend fertilizer. It can be tank mixed with most pesticides. Always make a small-scale test to assure compatibility. It can be soil or foliar applied, broadcast or banded over the row and injected through irrigation systems. **CAUTION: DO NOT USE IN HIGH PHOSPHATE "STARTER" OR "POP-UP" FERTILIZER MATERIALS SUCH AS 10-34-0. DO NOT USE IN FERTILIZER SOLUTIONS CONTAINING CALCIUM.**

CHEM-FLO™ LIQUID Peanut Special will disperse in water with minimal agitation. It serves as a buffer when used in tank mixes with pesticides. Follow the mixing sequence: 1. Water; 2. **CHEM-FLO™ LIQUID Peanut Special**; 3. Pesticide.

The optimum rate and timing of application will depend on local conditions and should always be made as a result of soil and/or plant tissue analysis in consultation with your local agricultural authorities. In the absence of test results, use the following as a guide:

Broadcast:

Severe Deficiency	4-6 qts per acre
Moderate Deficiency	2-4 qts per acre
Maintenance	1-2 qts per acre

Banded over the Row: Apply at 2-4 qts. per acre. Repeat as necessary if deficiency persists.

Foliar Application: Apply at 2-4 qts. per acre. Repeat as necessary if deficiency persists. Use sufficient water for thorough coverage. Ground: 10-20 gals per acre. Air: 3-5 gals per acre. Spray either early or later in the day for maximum leaf absorption.

WHAT TO DO IN CASE OF CONTACT

If Ingested:	Give large amounts of water or milk, if conscious. Contact a physician immediately.
Eye Contact:	Flush eyes with clean water for 15 minutes. Seek medical attention immediately.
Skin Contact:	Remove contaminated clothing and wash skin with soap and water. Seek medical attention if irritation develops or persists.
If Inhaled:	Move to fresh air and seek medical attention if irritation develops or persists.
